

DIE-LUBRIC ANTILÖT

Anti-soldering paste for die-casting

DIE-LUBRIC ANTILÖT is a black, graphite-containing, pasty die-face lubricant for the pretreatment of new or refurbished dies.

DIE-LUBRIC ANTILÖT contains solid lubricants (pigments) and organic materials of high thermal stability.

DIE-LUBRIC ANTILÖT is applied manually by swab or brush. It is characterized by its extraordinarily good adhesive properties and it also does not drip.

It is applied for treating critical areas of the die, to which castings may stick easily i.e. to avoid soldering.

If DIE-LUBRIC ANTILÖT is used excessively, a dark colouring of the castings may be the result. However, the product does not leave residues in the die which may influence the dimensional stability.
